How we colour match

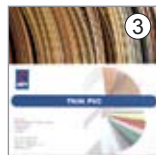

To achieve the most accurate colour match NEY always view and grade samples under natural daylight or in a light chamber.

The light chamber, with its special lamps, is an instrument recognised and accepted throughout the world for simulating daylight.

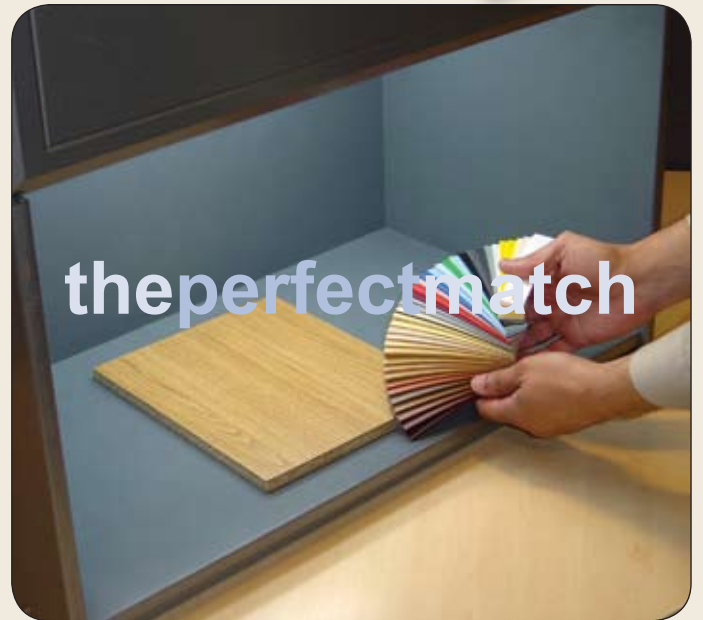

All our suppliers use the same methods and equipment for analysing colour variation. This is necessary due to the many different types of lighting used in the workplace, each potentially giving a contrasting quality of match.

Swatches:

1. Thick PVC Plain Colours
2. Thick PVC WoodGrain
3. Thin PVC
4. ABS
5. Formica
6. Standard Swatch: Melamine, Polyester & Thin Veneers
7. Thick Veneer: Thru & Thru Range

If you would like a swatch please do not hesitate to contact us. Alternatively visit our website and request one on-line. A4 samples of foil material are also available on request.

Although quality of match ratings are shown in the following pages, it is highly recommended that samples be viewed for your own appraisal prior to ordering.

COLOUR MATCH RATING SYSTEM

KEY

- 1 = Very Good Match
- 2 = Good Match
- 3 = Close Match

Please note all ratings are subjective.
NEY recommend samples are obtained prior to ordering.
