

Buffer Systems

Ideal for the Shopfitting Industry

Ideal for checkouts

Rigid track

Available in a variety of stock colours - see table below

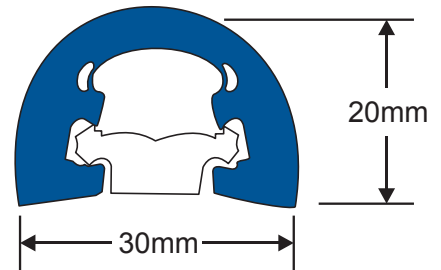

Introduction to Buffer Systems

This Buffer System is used extensively in the shopfitting industry at checkout stations and aisles where the protection of walls and display units are desirable. This system would be suitable for many other applications where its functionality is essential or for its aesthetic appeal. Available in a variety of stock colours, with other colours available subject to a minimum order requirement.

Our stock size is 30mm, however 40mm and 50mm profiles are also available to special order and will be subject to a minimum order quantities.

The Buffer System primarily comprises of a soft dual hardness snap-on PVC buffer and a rigid track with corners and end caps also available in matching colours.

Mostly used in straight lengths with corner fittings and end caps, the track is flexible enough to bend around a 50mm radius and still allowing the buffer to be clipped on without causing any deformation, this is due to its dual hardness construction.

The track is flexible enough to bend around a radius of 50mm without causing deformation.

Buffer	Colours
	Beige, Brown, Blue, Black, Grey and White All come in 21m coils
Part No: TW0130	

Track	Colours
	White 2m lengths only
Part No: TW0200
