Plasterboard

Woodscrews

High performance Wood screws are designed for use without pilot holes and give exceptional performance even in the hardest of hardwoods. They save time and help increase productivity giving a safe and reliable fastening.

The sharp point with double angle taper bites quickly into any type of timber from extremely hard to soft wood and chipboard, without the need for a pilot hole.

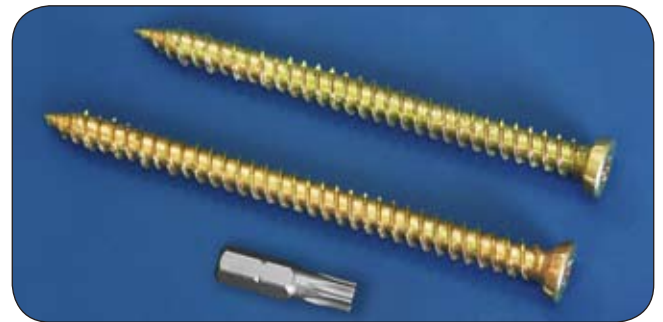

The special head design allows a deeper recess into which the driver will fit very securely, giving longer bit life and less chance of the bit riding out of the recess.

The deep thread with wide pitch gives high stripping torque, so that it is easy to tighten the screw with less risk of damaging the workpiece.

Frame Fixing Screws

With the aid of a pilot hole this frame fixing screw taps directly into brickwork, concrete, hollow blocks, natural stone etc, doing away with the need for plugs or nylon anchors.

The 7.5mm diameter fixing requires a 6mm diameter pilot hole into masonry and other similar substrates, with a 6.2mm diameter hole for steel-reinforced PVC-U frames. A purpose made driver bit is included in each box and are also available separately.

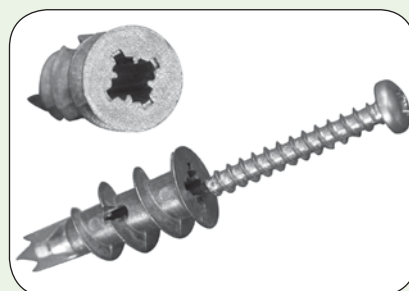

Timber Decking Screws

Suitable for outdoor applications, the ASP-GARD finish is resistant to Tanolin Acid and will withstand 1,000 hours of salt spray. They're also lubricated for quicker driving.

Plasterboard Anchor Fixing

For direct use into plasterboard, this self drilling anchor is quick and easy to use and comes complete with a pan head screw.

Euro screws

NEY supply three different types of euro screw:

Countersunk head (as shown), Pan head and Flat head.
